

How does Google Search work

1. Keyword: word that is searched by the user.
Index: list of things with references.
Spiders: machines that go on pages and go on links of those pages and so on to locate what you've searched for.
2. Because they have different ways to finding links of what you searched.
3. Number of times opened, linked, searched so on.
4. Google it's the fastest used the most and easiest to use and most recommended by others.
